

Backend 3.5_CW Exercises

ex01: view documentation

1. Click on "Collections" in the sidebar to access your collection.
2. Next to the collection, click on the "more actions" icon (three dots) and select "View Documentation."

3. Once you're in the "Documentation" view of your collection, click on the "Publish" button located at the upper right corner.

ex02: configure publication settings

1. In the publishing settings, you'll see various options. Configure them according to your preferences:

Publish Collection Documentation

RESTful API basics: CRUD, test & variable

Content

Version: CURRENT

Environment: No Environment

URL

Custom Domain (optional): No custom domain

Appearance NEW

Default Layout: ☒ Double column ☐ Single column

Default Theme: Light

Logo: [Light Theme Logo] [Dark Theme Logo]

Preview Documentation

- Version: If your collection has multiple versions, select the versions you want to publish.
- Environment: Select an environment to publish environment variables with your documentation. Ensure sensitive information like passwords or tokens is not included in initial variable values.
- Custom Domain: If you have a custom domain, you can select it to publish your documentation under your own domain.
- Default Layout: Choose a layout style for your documentation. "Double column" shows sample code beside the documentation, while "Single column" displays sample code beneath each request.
- Default Theme: Choose a light, dark, or system theme for your documentation.
- Logo: Upload a custom logo for each theme (light and dark) if desired.
- Colors: Customize header background, code background, and hyperlink highlight colors for each theme.
- SEO: Improve discoverability by adding metadata:
 - Title: Add a title (up to 60 characters) for web searches and browser tabs.
 - Description: Provide a brief description (up to 160 characters) and relevant keywords for better web search results.

2. Use the "Preview Documentation" option to see how your documentation will appear with the selected settings. Note any warnings about sensitive tokens or secrets and remove them if necessary.

ex03: publish your documentation

- Optionally select a public workspace to move the collection to. This makes the collection discoverable on the Public API Network.
- When ready, click "Publish." Your public documentation will be available at the provided URL.
